Package 'antaresEditObject'

November 8, 2021

Type Package

Title Edit an 'Antares' Simulation

Version 0.3.0

Description Edit an 'Antares' simulation before running it : create new areas, links, thermal clusters or binding constraints or edit existing ones. Update 'Antares' general & optimization settings.
'Antares' is an open source power system generator, more information available here : <https://antares-simulator.org/>.

R topics documented:

activateRES *Activate RES in an Antares study*

Description

Helper to activate Renewables Energy Sources. This will update `renewable.generation.modelling` parameter and create appropriate structure for RES clusters.

Usage

```
activateRES(opts = antaresRead::simOptions(), quietly = !interactive())
```

Arguments

`opts`	List of simulation parameters returned by the function `antaresRead::setSimulationPath`
`quietly`	Display or not a message to the user if success.

Value

An updated list containing various information about the simulation.

Examples

```
## Not run:

library(antaresEditObject)
tmp <- tempfile()
createStudy(path = tmp)
opts <- antaresRead::setSimulationPath(tmp)
activateRES()

# then you can use createClusterRES()...

## End(Not run)
```

backupStudy *Create a backup with an Antares Study*

Description

Save an Antares Study or only inputs in a `.tar.gz` file

Usage

```
backupStudy(
  backupfile,
  what = c("input", "study"),
  opts = antaresRead::simOptions()
)
```

Arguments

backupfile	Name of the backup, without extension. If missing, either the name of the study or 'input' according argument what.
what	Which folder to save, input for the input folder or study for the whole study.
opts	List of simulation parameters returned by the function antaresRead::setSimulationPath

Value

The path of the backup

Examples

```
## Not run:
backupStudy()

## End(Not run)
```

---

checkRemovedArea *Seek for a removed area*

Description

Check if it remains trace of a deleted area in the input folder

Usage

```
checkRemovedArea(area, all_files = TRUE, opts = antaresRead::simOptions())
```

Arguments

area	An area
all_files	Check files in study directory.
opts	List of simulation parameters returned by the function antaresRead::setSimulationPath

Value

a named list with two elements

Examples

```
## Not run:
checkRemovedArea("myarea")

## End(Not run)
```

`computeTimeStampFromHourly` *Compute daily, weekly, monthly and annual mc-ind from hourly data.*

Description

Compute daily, weekly, monthly and annual mc-ind from hourly data.

Usage

```
computeTimeStampFromHourly(
  opts,
  mcYears = "all",
  nbcl = 8,
  verbose = 1,
  type = c("areas", "links", "clusters")
)
```

Arguments

`opts`	opts simulation path.
`mcYears`	mcYears to compute.
`nbcl`	number of thread for parallel computing.
`verbose`	verbose for execution.
`type`	type of file to compute.

Examples

```
## Not run:

library(antaresEditObject)
opts <- setSimulationPath("my_study")
computeTimeStampFromHourly(opts)

## End(Not run)
```

copyOutput *Copy of the output files of an Antares study*

Description

Copy of the output files of an Antares study

Usage

```
copyOutput(opts, extname, mcYears = "all")
```

Arguments

opts	List of simulation parameters returned by the function `antaresRead::setSimulationPath`
extname	Extension to be added to the name of the study, to be used as a name for the newly created folder.
mcYears	mcYears to copy. Can be `"all"`.

Examples

```
## Not run:

library(antaresRead)

# Set simulation path
opts = setSimulationPath(path = "PATH/TO/SIMULATION", simulation = "input")

# Create a new area
copyOutput(opts, "_adq")

## End(Not run)
```

create-cluster *Create a cluster*

Description

Create a new thermal or RES (renewable energy source) cluster.

Usage

```
createCluster(
  area,
  cluster_name,
  group = "Other",
  ...,
  time_series = NULL,
  prepro_data = NULL,
  prepro_modulation = NULL,
  add_prefix = TRUE,
  overwrite = FALSE,
  opts = antaresRead::simOptions()
)

createClusterRES(
  area,
  cluster_name,
  group = "Other RES 1",
  ...,
  time_series = NULL,
  add_prefix = TRUE,
  overwrite = FALSE,
  opts = antaresRead::simOptions()
)
```

Arguments

area	The area where to create the cluster.
cluster_name	Name for the cluster, it will prefixed by area name, unless you set add_prefix = FALSE.
group	Group of the cluster, depends on cluster type: • thermal cluster, one of: Gas, Hard coal, Lignite, Mixed fuel, Nuclear, Oil, Other, Other 2, Other 3, Other 4. • renewable cluster, one of: Wind Onshore, Wind Offshore, Solar Thermal, Solar PV, Solar Rooftop, Other RES 1, Other RES 2, Other RES 3, Other RES 4.
...	Parameters to write in the Ini file. Careful! Some parameters must be set as integers to avoid warnings in Antares, for example, to set unitcount, you'll have to use unitcount = 1L.
time_series	the "ready-made" 8760-hour time-series available for simulation purposes.
prepro_data	Pre-process data, a data.frame or matrix, default is a matrix with 365 rows and 6 columns.
prepro_modulation	Pre-process modulation, a data.frame or matrix, if specified, must have 8760 rows and 1 or 4 columns.
add_prefix	If TRUE (the default), cluster_name will be prefixed by area name.

overwrite	Logical, overwrite the cluster or not.
opts	List of simulation parameters returned by the function antaresRead::setSimulationPath()

Value

An updated list containing various information about the simulation.

See Also

editCluster() or editClusterRES() to edit existing clusters, removeCluster() or removeClusterRES() to remove clusters.

Examples

```
## Not run:

library(antaresRead)
library(antaresEditObject)

# Create a cluster :
createCluster(
  area = "fr",
  cluster_name = "my_cluster",
  group = "other",
  unitcount = 1L, # or as.integer(1)
  marginal_cost = 50
)
# by default, cluster name is prefixed
# by the area name
levels(readClusterDesc()$cluster)
# > "fr_my_cluster"

# To prevent this, use `add_prefix`
createCluster(
  area = "fr",
  cluster_name = "my_cluster",
  add_prefix = FALSE,
  group = "other",
  marginal_cost = 50
)
levels(readClusterDesc()$cluster)
# > "my_cluster"

# Create a RES cluster :
createClusterRES(
  area = "fr",
  cluster_name = "my_cluster_res",
  group = "other",
  unitcount = 1L, # or as.integer(1)
  nominalcapacity = 50,
  ts_interpretation = "power-generation"
```

```
)

# You can also specify that the Time-Series of the RES cluster are
# production factors :
createClusterRES(
  area = "fr",
  cluster_name = "my_cluster_res",
  group = "other",
  unitcount = 1L, # or as.integer(1)
  nominalcapacity = 50,
  ts_interpretation = "production-factor"
)

# Pre-process data :

# this is the default data :
createCluster(
  area = "fr",
  cluster_name = "my_cluster",
  prepro_data = matrix(
    data = c(rep(1, times = 365 * 2),
             rep(0, times = 365 * 4)),
    ncol = 6
  )
)

# with a data.frame
createCluster(
  area = "fr",
  cluster_name = "my_cluster",
  prepro_data = data.frame(
    v1 = rep(7, 365), # column name doesn't matter
    v2 = rep(27, 365),
    v3 = rep(0.05, 365),
    v4 = rep(0.12, 365),
    v5 = rep(0, 365),
    v6 = rep(1, 365)
  )
)

# Pre-process modulation :
# this is the default data
createCluster(
  area = "fr",
  cluster_name = "my_cluster",
  prepro_modulation =  = matrix(
    data = c(rep(1, times = 365 * 24 * 3),
             rep(0, times = 365 * 24 * 1)),
    ncol = 4
  )
)
```

```
# with a data.frame
createCluster(
  area = "fr",
  cluster_name = "my_cluster",
  prepro_modulation = data.frame(
    var1 = rep(0, 8760), # column name doesn't matter
    var2 = rep(1, 8760),
    var3 = rep(0, 8760),
    var4 = rep(1, 8760)
  )
)

## End(Not run)
```

`createArea` *Create An Area In An Antares Study*

Description

Create An Area In An Antares Study

Usage

```
createArea(
  name,
  color = grDevices::rgb(230, 108, 44, max = 255),
  localization = c(0, 0),
  nodalOptimization = nodalOptimizationOptions(),
  filtering = filteringOptions(),
  overwrite = FALSE,
  opts = antaresRead::simOptions()
)
```

Arguments

`name`	Name of the area as a character, without punctuation except - and _.
`color`	Color of the node
`localization`	Localization on the map
`nodalOptimization`	Nodal optimization parameters, see `nodalOptimizationOptions`.
`filtering`	Filtering parameters, see `filteringOptions`.
`overwrite`	Overwrite the area if already exist.
`opts`	List of simulation parameters returned by the function `antaresRead::setSimulationPath`

Value

An updated list containing various information about the simulation.

Examples

```
## Not run:

library(antaresRead)

# Set simulation path
setSimulationPath(path = "PATH/TO/SIMULATION", simulation = "input")

# Create a new area
createArea("fictive_area")

## End(Not run)
```

`createBindingConstraint` *Create a Binding Constraint*

Description

Create a Binding Constraint

Usage

```
createBindingConstraint(
  name,
  id = tolower(name),
  values = NULL,
  enabled = TRUE,
  timeStep = c("hourly", "daily", "weekly"),
  operator = c("both", "equal", "greater", "less"),
  coefficients = NULL,
  overwrite = FALSE,
  opts = antaresRead::simOptions()
)
```

Arguments

`name`	The name for the binding constraint
`id`	An id
`values`	Values used by the constraint. It contains one line per time step and three columns "less", "greater" and "equal".
`enabled`	Logical, is the constraint enabled ?

timeStep	Time step the constraint applies to : hourly, daily or weekly
operator	Type of constraint: equality, inequality on one side or both sides.
coefficients	A named vector containing the coefficients used by the constraint.
overwrite	If the constraint already exist, overwrite the previous value.
opts	List of simulation parameters returned by the function antaresRead::setSimulationPath

Value

An updated list containing various information about the simulation.

Examples

```
## Not run:
createBindingConstraint(
  name = "myconstraint",
  values = matrix(data = rep(0, 8760 * 3), ncol = 3),
  enabled = FALSE,
  timeStep = "hourly",
  operator = "both",
  coefficients = c("fr%myarea" = 1)
)

## End(Not run)
```

---

createDistrict *Create a district*

Description

Allows selecting a set of areas so as to bundle them together in a "district".

Usage

```
createDistrict(
  name,
  caption = NULL,
  comments = NULL,
  apply_filter = "none",
  add_area = NULL,
  remove_area = NULL,
  output = FALSE,
  overwrite = FALSE,
  opts = antaresRead::simOptions()
)
```

Arguments

name	District's name.
caption	Caption for the district.
comments	Comments for the district.
apply_filter	Possible values are add-all to add all areas to the district, remove-all to clear the district, or none (default) to don't apply a filter.
add_area	Character vector of area(s) to add to the district.
remove_area	Character vector of area(s) to remove from the district.
output	Logical, compute the results for the district or not?
overwrite	Logical, should the district be overwritten if already exist?
opts	List of simulation parameters returned by the function antaresRead::setSimulationPath

Value

An updated list containing various information about the simulation.

Examples

```
## Not run:
createDistrict(name = "mydistrict",
                apply_filter = "add-all",
                remove_area = c("fr", "be"))

## End(Not run)
```

---

createDSR *Create a Demand Side Response (DSR)*

Description

Create a Demand Side Response (DSR)

Usage

```
createDSR(
  areasAndDSRParam = NULL,
  spinning = 2,
  overwrite = FALSE,
  opts = antaresRead::simOptions()
)

getCapacityDSR(area = NULL, opts = antaresRead::simOptions())

editDSR(
  area = NULL,
```

```
  unit = NULL,
  nominalCapacity = NULL,
  marginalCost = NULL,
  spinning = NULL,
  opts = antaresRead::simOptions()
)
```

Arguments

areasAndDSRParam	A data.frame with 4 columns area, unit, nominalCapacity, marginalCost and hour. Hour represent the number of activation hours for the DSR per day.
spinning	DSR spinning
overwrite	Overwrite the DSR plant if already exist. This will overwrite the previous area and links.
opts	List of simulation parameters returned by the function antaresRead::setSimulationPath
area	an area where to edit the DSR
unit	DSR unit number
nominalCapacity	DSR nominalCapacity
marginalCost	DSR marginalCost

Value

createDSR() and editDSR() returns an updated list containing various information about the simulation.

getCapacityDSR() returns DSR capacity (unit * nominalCapacity of virtual cluster) of the area

Examples

```
## Not run:

library(antaresEditObject)
path<-pathToYourStudy
opts<-setSimulationPath(path, simulation = "input")
area, unit, nominalCapacity and marginalCost
dsrData<-data.frame(area = c("a", "b"), unit = c(10,20),
                nominalCapacity = c(100, 120), marginalCost = c(52, 65), hour = c(3, 7))

createDSR(dsrData)

createDSR(dsrData, spinning = 3, overwrite = TRUE)
getAreas()

## End(Not run)
## Not run:

getCapacityDSR("a")
```

```
editDSR("a", unit = 50, nominalCapacity = 8000)
getCapacityDSR("a")

## End(Not run)
## Not run:

getCapacityDSR("a")
editDSR("a", unit = 50, nominalCapacity = 8000, marginalCost = 45, hour = 9)
getCapacityDSR("a")

## End(Not run)
```

`createLink` *Create a link between two areas*

Description

Create a link between two areas

Usage

```
createLink(
  from,
  to,
  propertiesLink = propertiesLinkOptions(),
  dataLink = NULL,
  overwrite = FALSE,
  opts = antaresRead::simOptions()
)
```

Arguments

`from`	The first area from which to create a link
`to`	The second one
`propertiesLink`	a named list containing the link properties, e.g. hurdles-cost or transmission-capacities for example. See `propertiesLinkOptions`.
`dataLink`	For Antares v7, a matrix with eight column corresponding to : trans. capacity (direct) trans. capacity (indirect), hurdles cost (direct), hurdles cost (indirect), impedances, loop flow, PST min, PST max. If `NULL` (default), a matrix whose rows are equal to `1,1,0,0,0,0,0,0` is set. See Details
`overwrite`	Logical, overwrite the previous between the two areas if exist
`opts`	List of simulation parameters returned by the function `antaresRead::setSimulationPath`

Details

The eight times-series are:

- **NTC direct** : the upstream-to-downstream capacity, in MW
- **NTC indirect** : the downstream-to-upstream capacity, in MW
- **Hurdle cost direct** : an upstream-to-downstream transmission fee, in euro/MWh
- **Hurdle cost indirect** : a downstream-to-upstream transmission fee, in euro/MWh
- **Impedances** : virtual impedances that are used in economy simulations to give a physical meaning to raw outputs, when no binding constraints have been defined to enforce Kirchhoff's laws.
- **Loop flow** : amount of power flowing circularly though the grid when all "nodes" are perfectly balanced (no import and no export).
- **PST min** : lower bound of phase-shifting that can be reached by a PST installed on the link, if any.
- **PST max** : upper bound of phase-shifting that can be reached by a PST installed on the link, if any.

NB: For Antares v7 the eight columns must conform to above order. For Antares v6, only five columns are expected, and they must follow this other order: NTC direct, NTC indirect, Impedances, Hurdle cost direct, Hurdle cost indirect.

Value

An updated list containing various information about the simulation.

Note

In Antares, areas are sorted in alphabetical order to establish links between. For example, link between "fr" and "be" will appear under "be". So the areas are sorted before creating the link between them, and `dataLink` is rearranged to match the new order.

Examples

```
## Not run:

library(antaresRead)

# Set simulation path
setSimulationPath(path = "PATH/TO/SIMULATION", simulation = "input")

# Create a link between two areas
createLink(from = "first_area", to  = "second_area")

## End(Not run)
```

createPSP *Create a Pumped Storage Power plant (PSP)*

Description

Create a Pumped Storage Power plant (PSP)

Usage

```
createPSP(
  areasAndCapacities = NULL,
  namePumping = "Psp_In",
  nameTurbining = "Psp_Out",
  hurdleCost = 5e-04,
  timeStepBindConstraint = "weekly",
  efficiency = NULL,
  overwrite = FALSE,
  opts = antaresRead::simOptions()
)

getCapacityPSP(
  area = NULL,
  nameTurbining = "Psp_Out",
  timeStepBindConstraint = "weekly",
  opts = antaresRead::simOptions()
)

editPSP(
  area = NULL,
  capacity = NULL,
  namePumping = "Psp_In",
  nameTurbining = "Psp_Out",
  timeStepBindConstraint = "weekly",
  hurdleCost = 5e-04,
  opts = antaresRead::simOptions()
)
```

Arguments

areasAndCapacities	A data.frame with 2 columns `installedCapacity` and `area`
namePumping	The name of the pumping area
nameTurbining	The name of the turbining area
hurdleCost	The cost of the PSP
timeStepBindConstraint	Time step for the binding constraint : `daily` or `weekly`

efficiency	The efficiency of the PSP
overwrite	Overwrite the Pumped Storage Power plant if already exist. This will overwrite the previous area and links.
opts	List of simulation parameters returned by the function antaresRead::setSimulationPath
area	an area name
capacity	PSP capacity for the area

Value

createPSP() and editPSP() returns an updated list containing various information about the simulation.

getCapacityPSP() returns PSP capacity of the area

Examples

```
## Not run:

library(antaresEditObject)
path<-pathToYourStudy
opts<-setSimulationPath(path, simulation = "input")
pspData<-data.frame(area=c("a", "b"), installedCapacity=c(800,900))

createPSP(pspData, efficiency = 0.8)

createPSP(pspData, efficiency = 0.66, overwrite = TRUE)
createPSP(pspData, efficiency = 0.98, timeStepBindConstraint = "daily")
getAreas()

## End(Not run)

## Not run:

getCapacityPSP("a")
editPSP("a", capacity = 8000, hurdleCost = 0.1)
getCapacityPSP("a")

areaName<-"suisse"
createArea(areaName, overwrite = TRUE)
pspData<-data.frame(area=c(areaName), installedCapacity=c(9856))
createPSP(pspData, efficiency = 0.5, overwrite = TRUE, timeStepBindConstraint = "daily")

getCapacityPSP(areaName, timeStepBindConstraint = "daily")

## End(Not run)
```

createStudy *Create an empty Antares study*

Description

Create an empty Antares study

Usage

```
createStudy(path, study_name = "my_study", antares_version = "8.1.0")
```

Arguments

path	Path where to create study, it should be an empty directory, if it doesn't exist, it'll be created.
study_name	Name of the study.
antares_version	Antares number version.

Value

Result of `antaresRead::setSimulationPath()`.

Examples

```
## Not run:

createStudy("path/to/simulation")

## End(Not run)
```

dicoGeneralSettings *Correspondence between arguments of* updateGeneralSettings *and actual Antares parameters.*

Description

Correspondence between arguments of `updateGeneralSettings` and actual Antares parameters.

Usage

```
dicoGeneralSettings(arg)
```

Arguments

arg	An argument from function `updateGeneralSettings`.

Value

The corresponding Antares general parameter.

Examples

```
dicoGeneralSettings("year.by.year") # "year-by-year"
```

`dicoOptimizationSettings` *Correspondence between arguments of* `updateOptimizationSettings` *and actual Antares parameters.*

Description

Correspondence between arguments of `updateOptimizationSettings` and actual Antares parameters.

Usage

```
dicoOptimizationSettings(arg)
```

Arguments

`arg`	An argument from function `updateOptimizationSettings`.

Value

The corresponding Antares general parameter.

Examples

```
dicoGeneralSettings("year.by.year") # "year-by-year"
```

`edit-cluster` *Edit an existing cluster*

Description

Edit parameters of an existing cluster, thermal or RES (renewable energy source).

Usage

```
editCluster(
  area,
  cluster_name,
  ...,
  time_series = NULL,
  prepro_data = NULL,
  prepro_modulation = NULL,
  add_prefix = TRUE,
  opts = antaresRead::simOptions()
)

editClusterRES(
  area,
  cluster_name,
  ...,
  time_series = NULL,
  add_prefix = TRUE,
  opts = antaresRead::simOptions()
)
```

Arguments

area	The area where the cluster is.
cluster_name	cluster name.
...	Parameters to write in the Ini file.
time_series	the "ready-made" 8760-hour time-series available for simulation purposes.
prepro_data	Pre-process data, a data.frame or matrix, default is a matrix with 365 rows and 6 columns.
prepro_modulation	Pre-process modulation, a data.frame or matrix, if specified, must have 8760 rows and 1 or 4 columns.
add_prefix	If TRUE, cluster_name will be prefixed by area name.
opts	List of simulation parameters returned by the function antaresRead::setSimulationPath()

Value

An updated list containing various information about the simulation.

See Also

createCluster() or createClusterRES() to create new clusters, removeCluster() or removeClusterRES() to remove clusters.

Examples

```
## Not run:

# Update only nominalCapacity for an existing cluster
editCluster(
  area = "myarea",
  cluster_name = "mycluster",
  nominalcapacity = 10600.000
)

## End(Not run)
```

`editArea` *Edit An Existing Area In An Antares Study*

Description

Edit An Existing Area In An Antares Study

Usage

```
editArea(
  name,
  color = NULL,
  localization = NULL,
  nodalOptimization = NULL,
  filtering = NULL,
  opts = antaresRead::simOptions()
)
```

Arguments

`name`	Name of the area as a character, without punctuation except - and _.
`color`	Color of the node
`localization`	Localization on the map
`nodalOptimization`	Nodal optimization parameters, see `nodalOptimizationOptions`.
`filtering`	Filtering parameters, see `filteringOptions`.
`opts`	List of simulation parameters returned by the function `antaresRead::setSimulationPath`

Value

An updated list containing various information about the simulation.

Examples

```
## Not run:

library(antaresRead)

# Set simulation path
setSimulationPath(path = "PATH/TO/SIMULATION", simulation = "input")

# Edit an existing area
editArea("area", color = grDevices::rgb(230, 108, 44, max = 255),
  localization = c(1, 1),
  opts = antaresRead::simOptions())

editArea("de",  nodalOptimization = list("spilledenergycost" = list(fr = 30)),
opts = antaresRead::simOptions())

editArea("de",  nodalOptimization = nodalOptimizationOptions(),
opts = antaresRead::simOptions())

## End(Not run)
```

---

editBindingConstraint *Update An Existing Binding Constraint*

Description

Update An Existing Binding Constraint

Usage

```
editBindingConstraint(
  name,
  id = tolower(name),
  values = NULL,
  enabled = NULL,
  timeStep = NULL,
  operator = NULL,
  coefficients = NULL,
  opts = antaresRead::simOptions()
)
```

Arguments

name	The name for the binding constraint
id	An id
values	Values used by the constraint. It contains one line per time step and three columns "less", "greater" and "equal".

enabled	Logical, is the constraint enabled ?
timeStep	Time step the constraint applies to : hourly, daily or weekly
operator	Type of constraint: equality, inequality on one side or both sides.
coefficients	A named vector containing the coefficients used by the constraint.
opts	List of simulation parameters returned by the function antaresRead::setSimulationPath

Value

An updated list containing various information about the simulation.

Examples

```
## Not run:
editBindingConstraint(
  name = "toto",
  values = matrix(data = rep(0, 8760 * 3), ncol = 3),
  enabled = FALSE,
  timeStep = "hourly",
  operator = "both",
  coefficients = c("fr%de" = 1)
)

## End(Not run)
```

---

editLink *Edit a link between two areas*

Description

Edit a link between two areas

Usage

```
editLink(
  from,
  to,
  hurdles_cost = NULL,
  transmission_capacities = NULL,
  asset_type = NULL,
  display_comments = NULL,
  filter_synthesis = NULL,
  filter_year_by_year = NULL,
  dataLink = NULL,
  opts = antaresRead::simOptions()
)
```

Arguments

`from`	The first area from which to create a link
`to`	The second one
`hurdles_cost`	Logical, which is used to state whether (linear) transmission fees should be taken into account or not in economy and adequacy simulations
`transmission_capacities`	Character, one of `enabled`, `ignore` or `infinite`, which is used to state whether the capacities to consider are those indicated in 8760-hour arrays or if zero or infinite values should be used instead (actual values / set to zero / set to infinite)
`asset_type`	Character, one of `ac`, `dc`, `gas`, `virt` or `other`. Used to state whether the link is either an AC component (subject to Kirchhoff's laws), a DC component, or another type of asset.
`display_comments`	Logical
`filter_synthesis`	Output synthesis
`filter_year_by_year`	Output year-by-year
`dataLink`	For Antares v7, a matrix with eight column corresponding to : trans. capacity (direct) trans. capacity (indirect), hurdles cost (direct), hurdles cost (indirect), impedances, loop flow, PST min, PST max. If `NULL` (default), a matrix whose rows are equal to `1,1,0,0,0,0,0,0` is set. See Details
`opts`	List of simulation parameters returned by the function `antaresRead::setSimulationPath`

Details

The eight times-series are:

- **NTC direct** : the upstream-to-downstream capacity, in MW
- **NTC indirect** : the downstream-to-upstream capacity, in MW
- **Hurdle cost direct** : an upstream-to-downstream transmission fee, in euro/MWh
- **Hurdle cost indirect** : a downstream-to-upstream transmission fee, in euro/MWh
- **Impedances** : virtual impedances that are used in economy simulations to give a physical meaning to raw outputs, when no binding constraints have been defined to enforce Kirchhoff's laws.
- **Loop flow** : amount of power flowing circularly though the grid when all "nodes" are perfectly balanced (no import and no export).
- **PST min** : lower bound of phase-shifting that can be reached by a PST installed on the link, if any.
- **PST max** : upper bound of phase-shifting that can be reached by a PST installed on the link, if any.

NB: For Antares v7 the eight columns must conform to above order. For Antares v6, only five columns are expected, and they must follow this other order: NTC direct, NTC indirect, Impedances, Hurdle cost direct, Hurdle cost indirect.

Value

An updated list containing various information about the simulation.

Note

In Antares, areas are sorted in alphabetical order to establish links between. For example, link between "fr" and "be" will appear under "be". So the areas are sorted before creating the link between them, and `dataLink` is rearranged to match the new order.

Examples

```
## Not run:
editLink(
  from = "area1",
  to = "area2",
  transmission_capacities = "infinite"
)

## End(Not run)
```

---

filteringOptions *Output profile options for creating an area*

Description

Output profile options for creating an area

Usage

```
filteringOptions(
  filter_synthesis = c("hourly", "daily", "weekly", "monthly", "annual"),
  filter_year_by_year = c("hourly", "daily", "weekly", "monthly", "annual")
)
```

Arguments

`filter_synthesis`
: Output synthesis

`filter_year_by_year`
: Output Year-by-year

Value

a named list

Examples

```
filteringOptions()
```

getPlaylist *Get the playlist of an Antares study*

Description

getPlaylist gives the identifier of the MC years which will be simulated in the Antares study, taking into account the potential use of a playlist which can skip some MC years

Usage

```
getPlaylist(opts = antaresRead::simOptions())
```

Arguments

opts	list of simulation parameters returned by the function antaresRead::setSimulationPath

Value

Returns a vector of the identifier of the simulated MC year

is_antares_v7 *Is study an Antares v7 study ?*

Description

Is study an Antares v7 study ?

Usage

```
is_antares_v7(opts = antaresRead::simOptions())
```

Arguments

opts	List of simulation parameters returned by the function antaresRead::setSimulationPath

Value

a logical, TRUE if study is v7 or above, FALSE otherwise

Examples

```
## Not run:
# setSimulationPath

is_antares_v7()

## End(Not run)
```

`nodalOptimizationOptions` *Nodal optimization parameters for creating an area*

Description

Nodal optimization parameters for creating an area

Usage

```
nodalOptimizationOptions(
  non_dispatchable_power = TRUE,
  dispatchable_hydro_power = TRUE,
  other_dispatchable_power = TRUE,
  spread_unsupplied_energy_cost = 0,
  spread_spilled_energy_cost = 0,
  average_unsupplied_energy_cost = 0,
  average_spilled_energy_cost = 0
)
```

Arguments

`non_dispatchable_power`
: logical, default to FALSE

`dispatchable_hydro_power`
: logical, default to FALSE

`other_dispatchable_power`
: logical, default to FALSE

`spread_unsupplied_energy_cost`
: numeric, default to 0

`spread_spilled_energy_cost`
: numeric, default to 0

`average_unsupplied_energy_cost`
: numeric, default to 0

`average_spilled_energy_cost`
: numeric, default to 0

Value

a named list

Examples

```
nodalOptimizationOptions()
```

---

propertiesLinkOptions *Properties for creating a link*

Description

Properties for creating a link

Usage

```
propertiesLinkOptions(
  hurdles_cost = FALSE,
  transmission_capacities = "enabled",
  asset_type = "ac",
  display_comments = TRUE,
  filter_synthesis = c("hourly", "daily", "weekly", "monthly", "annual"),
  filter_year_by_year = c("hourly", "daily", "weekly", "monthly", "annual")
)
```

Arguments

`hurdles_cost`	Logical, which is used to state whether (linear) transmission fees should be taken into account or not in economy and adequacy simulations
`transmission_capacities`	Character, one of `enabled`, `ignore` or `infinite`, which is used to state whether the capacities to consider are those indicated in 8760-hour arrays or if zero or infinite values should be used instead (actual values / set to zero / set to infinite)
`asset_type`	Character, one of `ac`, `dc`, `gas`, `virt` or `other`. Used to state whether the link is either an AC component (subject to Kirchhoff's laws), a DC component, or another type of asset.
`display_comments`	Logical
`filter_synthesis`	Output synthesis
`filter_year_by_year`	Output year-by-year

Value

A named list

Examples

```
## Not run:
propertiesLinkOptions()

## End(Not run)
```

`readIniFile` *Read a INI file*

Description

Read a INI file

Usage

```
readIniFile(file, stringsAsFactors = FALSE)
```

Arguments

`file`	file path.
`stringsAsFactors`	logical: should character vectors be converted to factors?

Value

A list with an element for each section of the .ini file.

`remove-cluster` *Remove a cluster*

Description

Remove a cluster, thermal or RES (renewable energy source), and all its data.

Usage

```
removeCluster(
  area,
  cluster_name,
  add_prefix = TRUE,
  opts = antaresRead::simOptions()
)

removeClusterRES(
  area,
  cluster_name,
```

```
  add_prefix = TRUE,
  opts = antaresRead::simOptions()
)
```

Arguments

area	Area from which to remove a cluster.
cluster_name	Cluster to remove.
add_prefix	If TRUE, cluster_name will be prefixed by area's name.
opts	List of simulation parameters returned by the function antaresRead::setSimulationPath

Value

An updated list containing various information about the simulation.

See Also

createCluster() or createClusterRES() to create new clusters, editCluster() or editClusterRES() to edit existing clusters.

Examples

```
## Not run:
createCluster(area = "fr", cluster_name = "fr_gas",
              group = "other", `marginal-cost` = 50)

removeCluster(area = "fr", cluster_name = "fr_gas")

## End(Not run)
```

---

removeArea *Remove An Area From inputs*

Description

Remove An Area From inputs

Usage

```
removeArea(name, opts = antaresRead::simOptions())
```

Arguments

name	An area name
opts	List of simulation parameters returned by the function antaresRead::setSimulationPath

Value

An updated list containing various information about the simulation.

Examples

```
## Not run:
removeArea("fictive_area")

## End(Not run)
```

`removeBindingConstraint` *Remove a Binding Constraint*

Description

Remove a Binding Constraint

Usage

```
removeBindingConstraint(name, opts = antaresRead::simOptions())
```

Arguments

`name`	Name(s) of the binding constraint(s) to remove.
`opts`	List of simulation parameters returned by the function `antaresRead::setSimulationPath`

Value

An updated list containing various information about the simulation.

Examples

```
## Not run:
removeBindingConstraint("mybindingconstraint")

## End(Not run)
```

removeLink *Remove a link between two areas*

Description

Remove a link between two areas

Usage

```
removeLink(from, to, opts = antaresRead::simOptions())
```

Arguments

from	The first area from which to create a link
to	The second one
opts	List of simulation parameters returned by the function antaresRead::setSimulationPath

Value

An updated list containing various information about the simulation.

Examples

```
## Not run:
createLink(from = "myarea", to  = "myarea2")
removeLink(from = "myarea", to  = "myarea2")

## End(Not run)
```

runSimulation *Run an Antares Simulation*

Description

run_simulation is a function which runs an ANTARES study in economic mode

Usage

```
runSimulation(
  name,
  mode = "economy",
  path_solver = getOption("antares.solver"),
  wait = TRUE,
  show_output_on_console = FALSE,
  parallel = TRUE,
  opts = antaresRead::simOptions()
)
```

Arguments

name	Name of the simulation.
mode	Simulation mode, can take value "economy", "adequacy" or "draft".
path_solver	Character containing the Antares Solver path
wait	Logical, indicating whether the R interpreter should wait for the simulation to finish, or run it asynchronously.
show_output_on_console	Logical, indicating whether to capture the ANTARES log and show it on the R console.
parallel	Logical. If TRUE the ANTARES simulation will be run in parallel mode (Work only with ANTARES v6.0.0 or more). In that case, the number of cores used by the simulation is the one set in advanced_settings/simulation_cores (see ANTARES interface).
opts	List of simulation parameters returned by the function antaresRead::setSimulationPath

Value

The function does not return anything. It is used to launch an ANTARES simulation

---

runTsGenerator *Run Time-Series Generator*

Description

Run Time-Series Generator

Usage

```
runTsGenerator(
  path_solver = getOption("antares.solver"),
  wait = TRUE,
  show_output_on_console = FALSE,
  opts = antaresRead::simOptions()
)
```

Arguments

path_solver	Character containing the Antares Solver path.
wait	Logical, indicating whether the R interpreter should wait for the simulation to finish, or run it asynchronously.
show_output_on_console	Logical, indicating whether to capture the ANTARES log and show it on the R console.
opts	List of simulation parameters returned by the function antaresRead::setSimulationPath.

Examples

```
## Not run:
library(antaresRead)
setSimulationPath(path = "path/to/study")

library(antaresEditObject)
runTsGenerator(
  path_solver = "path/to/antares-6.0-solver.exe",
  show_output_on_console = TRUE
)

## End(Not run)
```

`scenario-builder` *Read, create & update scenario builder*

Description

Read, create & update scenario builder

Usage

```
scenarioBuilder(
  n_scenario,
  n_mc = NULL,
  areas = NULL,
  areas_rand = NULL,
  opts = antaresRead::simOptions()
)

readScenarioBuilder(
  ruleset = "Default Ruleset",
  as_matrix = TRUE,
  opts = antaresRead::simOptions()
)

updateScenarioBuilder(
  ldata,
  ruleset = "Default Ruleset",
  series = NULL,
  clusters_areas = NULL,
  opts = antaresRead::simOptions()
)

clearScenarioBuilder(
  ruleset = "Default Ruleset",
  opts = antaresRead::simOptions()
)
```

Arguments

n_scenario	Number of scenario.
n_mc	Number of Monte-Carlo years.
areas	Areas to use in scenario builder, if NULL (default) all areas in Antares study are used.
areas_rand	Areas for which to use "rand".
opts	List of simulation parameters returned by the function antaresRead::setSimulationPath()
ruleset	Ruleset to read.
as_matrix	If TRUE (default) return a matrix, else a list.
ldata	A matrix obtained with scenarioBuilder, or a named list of matrices obtained with scenarioBuilder, names must be 'l', 'h', 'w', 's', 't' or 'r', depending on the series to update.
series	Name(s) of the serie(s) to update if ldata is a single matrix.
clusters_areas	A data.table with two columns area and cluster to identify area/cluster couple to update for thermal or renewable series. Default is to read clusters description and update all couples area/cluster.

Value

scenarioBuilder : a matrix

readScenarioBuilder : a list of matrix or list according to as_matrix parameters.

Examples

```
## Not run:

library(antaresRead)
library(antaresEditObject)

# simulation path
setSimulationPath(
  path = "pat/to/simulation",
  simulation = "input"
)

# Create a scenario builder matrix
sbuilder <- scenarioBuilder(
  n_scenario = 51,
  n_mc = 2040,
  areas_rand = c("fr", "be")
)
sbuilder[, 1:6]
dim(sbuilder)

# Read previous scenario builder
# in a matrix format
```

```
prev_sb <- readScenarioBuilder()

# Update scenario builder

# for load serie
updateScenarioBuilder(ldata = sbuilder, series = "load")

# equivalent as
updateScenarioBuilder(ldata = list(l = sbuilder))

# update several series

# same input
sbuilder
updateScenarioBuilder(
  ldata = sbuilder,
  series = c("load", "hydro", "solar")
)

# different input
updateScenarioBuilder(ldata = list(
  l = load_sb,
  h = hydro_sb,
  s = solar_sb
))

## End(Not run)
```

`setPlaylist` *Set the playlist of an Antares Study*

Description

`set_playlist` is a function which modifies the input file of an ANTARES study and set the playlist in order to simulate only the MC years given in input

Usage

```
setPlaylist(playlist, weights = NULL, opts = antaresRead::simOptions())
```

Arguments

`playlist`	vector of MC years identifier to be simulated can be a list (V8 compatibility) but not recommended
`weights`	data.table, 2 columns : mcYears and weights. Only with after antares V8
`opts`	list of simulation parameters returned by the function `antaresRead::setSimulationPath`

Value

The function does not return anything. It is used to modify the input of an Antares study

---

`setSolverPath` *Set path to Antares Solver*

Description

Set path to Antares Solver

Usage

```
setSolverPath(path)
```

Arguments

`path`	(optional) Path to the solver (e.g. `antares-6.0-solver.exe` in \bin directory where Antares is installed). If missing, a window opens and lets the user choose the directory of the simulation interactively.

Examples

```
## Not run:

setSolverPath(path = "C:/antares/bin/antares-6.0-solver.exe")

## End(Not run)
```

`updateGeneralSettings` *Update general parameters of an Antares study*

Description

Update general parameters of an Antares study

Usage

```
updateGeneralSettings(
  mode = NULL,
  horizon = NULL,
  nbyears = NULL,
  simulation.start = NULL,
  simulation.end = NULL,
  january.1st = NULL,
  first.month.in.year = NULL,
  first.weekday = NULL,
  leapyear = NULL,
  year.by.year = NULL,
  derated = NULL,
  custom.ts.numbers = NULL,
  user.playlist = NULL,
  filtering = NULL,
  active.rules.scenario = NULL,
  generate = NULL,
  nbtimeseriesload = NULL,
  nbtimeserieshydro = NULL,
  nbtimeserieswind = NULL,
  nbtimeseriesthermal = NULL,
  nbtimeseriessolar = NULL,
  refreshtimeseries = NULL,
  intra.modal = NULL,
  inter.modal = NULL,
  refreshintervalload = NULL,
  refreshintervalhydro = NULL,
  refreshintervalwind = NULL,
  refreshintervalthermal = NULL,
  refreshintervalsolar = NULL,
  readonly = NULL,
  opts = antaresRead::simOptions()
)
```

Arguments

mode	Economy, Adequacy, Draft.
horizon	Reference year (static tag, not used in the calculations)
nbyears	Number of Monte-Carlo years that should be prepared for the simulation (not always the same as the Number of MC years actually simulated, see 'selection mode' below).
simulation.start	First day of the simulation (e.g. 8 for a simulation beginning on the second week of the first month of the year)
simulation.end	Last day of the simulation (e.g. 28 for a simulation ending on the fourth week of the first month of the year)

`january.1st` First day of the year (Mon, Tue, etc.).

`first.month.in.year`
Actual month by which the Time-series begin (Jan to Dec, Oct to Sep, etc.)

`first.weekday` In economy or adequacy simulations, indicates the frame (Mon- Sun, Sat-Fri, etc.) to use for the edition of weekly results.

`leapyear` (TRUE/FALSE) indicates whether February has 28 or 29 days.

`year.by.year` (False) No individual results will be printed out, (True) For each simulated year, detailed results will be printed out in an individual directory7 : Study_name/OUTPUT/simu_tag/Economy /mc-i-number

`derated` See Antares General Reference Guide.

`custom.ts.numbers`
See Antares General Reference Guide.

`user.playlist` See Antares General Reference Guide.

`filtering` See Antares General Reference Guide.

`active.rules.scenario`
See Antares General Reference Guide.

`generate` See Antares General Reference Guide.

`nbtimeseriesload`
See Antares General Reference Guide.

`nbtimeserieshydro`
See Antares General Reference Guide.

`nbtimeserieswind`
See Antares General Reference Guide.

`nbtimeseriesthermal`
See Antares General Reference Guide.

`nbtimeseriessolar`
See Antares General Reference Guide.

`refreshtimeseries`
See Antares General Reference Guide.

`intra.modal` See Antares General Reference Guide.

`inter.modal` See Antares General Reference Guide.

`refreshintervalload`
See Antares General Reference Guide.

`refreshintervalhydro`
See Antares General Reference Guide.

`refreshintervalwind`
See Antares General Reference Guide.

`refreshintervalthermal`
See Antares General Reference Guide.

`refreshintervalsolar`
See Antares General Reference Guide.

`readonly` See Antares General Reference Guide.

`opts` List of simulation parameters returned by the function `antaresRead::setSimulationPath()`

Value

An updated list containing various information about the simulation.

Examples

```
## Not run:

# Update number of Monte-Carlo years
updateGeneralSettings(nbyears = 42)

# Use a vector to update a parameter that
# can take multiple values
updateGeneralSettings(generate = c("thermal", "hydro"))

## End(Not run)
```

---

updateInputSettings *Update input parameters of an Antares study*

Description

Update input parameters of an Antares study

Usage

```
updateInputSettings(import, opts = antaresRead::simOptions())
```

Arguments

import	Series to import.
opts	List of simulation parameters returned by the function antaresRead::setSimulationPath()

Value

An updated list containing various information about the simulation.

Examples

```
## Not run:

updateInputSettings(import = c("thermal"))
updateInputSettings(import = c("hydro", "thermal"))

## End(Not run)
```

`updateOptimizationSettings` *Update optimization parameters of an Antares study*

Description

Update optimization parameters of an Antares study

Usage

```
updateOptimizationSettings(
  simplex.range = NULL,
  transmission.capacities = NULL,
  include.constraints = NULL,
  include.hurdlecosts = NULL,
  include.tc.min.stable.power = NULL,
  include.tc.min.up.down.time = NULL,
  include.dayahead = NULL,
  include.strategicreserve = NULL,
  include.spinningreserve = NULL,
  include.primaryreserve = NULL,
  include.exportmps = NULL,
  power.fluctuations = NULL,
  shedding.strategy = NULL,
  shedding.policy = NULL,
  unit.commitment.mode = NULL,
  number.of.cores.mode = NULL,
  renewable.generation.modelling = NULL,
  day.ahead.reserve.management = NULL,
  opts = antaresRead::simOptions()
)
```

Arguments

`simplex.range`	week or day
`transmission.capacities`	true, false or infinite
`include.constraints`	true or false
`include.hurdlecosts`	true or false
`include.tc.min.stable.power`	true or false
`include.tc.min.up.down.time`	true or false
`include.dayahead`	true or false

include.strategicreserve
: true or false

include.spinningreserve
: true or false

include.primaryreserve
: true or false

include.exportmps
: true or false

power.fluctuations
: free modulations, minimize excursions or minimize ramping

shedding.strategy
: share margins

shedding.policy
: shave peaks or minimize duration

unit.commitment.mode
: fast or accurate

number.of.cores.mode
: minimum, low, medium, high or maximum

renewable.generation.modelling
: aggregated or clusters

day.ahead.reserve.management
: global

opts
: List of simulation parameters returned by the function `antaresRead::setSimulationPath`

Value

An updated list containing various information about the simulation options.

`updateOutputSettings` *Update output parameters of an Antares study*

Description

Update output parameters of an Antares study

Usage

```
updateOutputSettings(
  synthesis = NULL,
  storenewset = NULL,
  archives = NULL,
  opts = antaresRead::simOptions()
)
```

Arguments

synthesis	Logical. If TRUE, synthetic results will be stored in a directory Study_name/OUTPUT/simu_tag/Econom all. If FALSE, No general synthesis will be printed out.
storenewset	Logical. See Antares General Reference Guide.
archives	Character vector. Series to archive.
opts	List of simulation parameters returned by the function antaresRead::setSimulationPath

Value

An updated list containing various information about the simulation.

Examples

```
## Not run:

updateOutputSettings(synthesis = TRUE, storenewset = FALSE,
                     archives = c("load", "wind"))

## End(Not run)
```

---

writeEconomicOptions *Write Economic Options*

Description

This function allows to create or edit economic options. Areas/options present in the input dataframe are edited, while all other values are left unchanged.

Usage

```
writeEconomicOptions(x, opts = antaresRead::simOptions())
```

Arguments

x	A dataframe. Must contain an area column listing some (but not necessarily all) areas of the study. Can contain up to 7 other columns among: average_unsupplied_energy_cost, spread_unsupplied_energy_cost, average_spilled_energy_cost, spread_spilled_energy_cost (numeric columns), non_dispatchable_power, dispatchable_hydro_power and other_dispatchable_power (logical columns).
opts	List of simulation parameters returned by the function antaresRead::setSimulationPath

Examples

```
## Not run:

library(antaresRead)

# Set simulation path
setSimulationPath(path = "PATH/TO/SIMULATION", simulation = "input")

# Write some economic options for areas a, b and c
writeEconomicOptions(data.frame(
  area = c("a", "b", "c"),
  dispatchable_hydro_power = c(TRUE, FALSE, FALSE),
  spread_unsupplied_energy_cost = c(0.03, 0.024, 0.01),
  average_spilled_energy_cost = c(10, 8, 8),
  stringsAsFactors = FALSE
))

## End(Not run)
```

`writeIni` *Write ini file from list obtain by antaresRead:::readIniFile and modify by user*

Description

Write ini file from list obtain by antaresRead:::readIniFile and modify by user

Usage

```
writeIni(listData, pathIni, overwrite = FALSE)
```

Arguments

`listData`	`list`, modified list obtained by antaresRead:::readIniFile.
`pathIni`	`Character`, Path to ini file.
`overwrite`	logical, should file be overwritten if already exist?

Examples

```
## Not run:
pathIni <- "D:/exemple_test/settings/generaldata.ini"
generalSetting <- antaresRead:::readIniFile(pathIni)
generalSetting$output$synthesis <- FALSE
writeIni(generalSetting, pathIni)

## End(Not run)
```

writeInputTS *Write input time series*

Description

This function writes input time series in an Antares project.

Usage

```
writeInputTS(
  area,
  type = c("load", "hydroROR", "hydroSTOR", "wind", "solar"),
  data,
  overwrite = TRUE,
  opts = antaresRead::simOptions()
)
```

Arguments

area	The area where to write the input time series.
type	Serie to write: "load", "hydroROR", "hydroSTOR", "wind" or "solar".
data	A 8760*N matrix of hourly time series, except when* type *is* "hydroSTOR". *In this latter case,* data *must either be 365*N (Antares v7) or 12*N (v6 and earlier).
overwrite	Logical. Overwrite the values if a file already exists.
opts	List of simulation parameters returned by the function antaresRead::setSimulationPath.

Examples

```
## Not run:

writeInputTS("fictive_area", type = "solar", data = matrix(rep(4, 8760*2), nrow = 8760))

## End(Not run)
```

writeOutputValues *Write output value for Antares*

Description

This function write all output values for an Antares study.

Usage

```
writeOutputValues(data, opts = NULL)
```

Arguments

data	obtain with readAntares
opts	List of simulation parameters returned by the function antaresRead::setSimulationPath

Examples

```
## Not run:

library(antaresRead)
library(data.table)
opts <- setSimulationPath("my_study")
data <- readAntares(links = "all", areas = "all", clusters = "all")
writeOutputValues(data)

## End(Not run)
```

---

writeSeriesPrepro *Write prepro data*

Description

This function allows to write load, wind and solar prepro data. Using character(0) allows to erase data (cf Examples).

Usage

```
writeSeriesPrepro(
  area,
  type = c("load", "wind", "solar"),
  coefficients = NULL,
  daily_profile = NULL,
  translation = NULL,
  conversion = NULL,
  overwrite = TRUE,
  opts = antaresRead::simOptions()
)
```

Arguments

area	The area where to write prepro data.
type	Type of data to write : "load", "wind" or "solar".
coefficients	A 12*6 matrix of monthly values for the primary parameters alpha, beta, gamma, delta, theta and mu.

daily_profile	A 24*12 matrix of hourly / monthly coefficients K(hm) that are used to modulate the values of the stationary stochastic process by which the actual process is approximated.
translation	A vector of length 8760 (or 8760*1 matrix) to add to the time-series generated, prior or after scaling.
conversion	A 2*N matrix (with 1<=N<=50) that is used to turn the initial time-series produced by the generators into final data. See Antares General Reference Guide.
overwrite	Logical. Overwrite the values if a file already exists.
opts	List of simulation parameters returned by the function `antaresRead::setSimulationPath`.

Examples

```
## Not run:

writeSeriesPrepro("fictive_area", type = "solar", daily_profile = matrix(rep(1, 24*12), nrow = 24))

# Erase daily profile data:
writeSeriesPrepro("fictive_area", type = "solar", daily_profile = character(0))

## End(Not run)
```

---

writeWaterValues *Write water values*

Description

Write water values

Usage

```
writeWaterValues(
  area,
  data = NULL,
  overwrite = TRUE,
  opts = antaresRead::simOptions()
)
```

Arguments

area	The area where to add the water values.
data	A 365x101 numeric matrix: table of marginal values for the stored energy, which depends on the date (365 days) and on the reservoir level (101 round percentage values ranging from 0% to 100%). OR a 3-column matrix with 365x101 rows. In this latter case the 3 columns must be 'date', 'level' and 'value' (in this order), and the rows must be sorted by: ascending day, ascending level.
overwrite	Logical. Overwrite the values if a file already exists.
opts	List of simulation parameters returned by the function `antaresRead::setSimulationPath()`.

Examples

```
## Not run:

writeWaterValues("fictive_area", data = matrix(rep(0, 365*101), nrow = 365))

## End(Not run)
```
